## **ADXTG 400 and PE3 concept e-Scooter Lead SYM's EICMA 2023 Line-up**

*Welcome to SYM booth and let's take a review on these exhilarating scooters!*

### **ADXTG 400**

The ADXTG 400 is SYM's flagship adventure scooter, idea derived from "saber-toothed tiger", accessing various terrain is the ADXTG 400's capability. In order to innovate a new type multipurpose maxi scooter, the SYM R&D lab applied sturdy engine and chassis technologies to this adventure machine.

The BOSCH off-road ABS lead the tech content. Combined with euro style aluminum swing arm, Sanyang multilink suspension, manual adjustable windscreen and dual sport tires, SYM has defined a new mobility from routine commute to weekend light off-road.

### **MAXSYM GT**

As the successor of the MAXSYM 400, the MAXSYM GT has become a progressive all-that-you-want maxi sport tourer. Upgraded rider comfort with pillion ride seat, standard equipped top case carrier, 288 mm large floating disk and 6 inch digital dash are the contemporary "Gran Turismo" package that SYM brought to lovers of road trips.

### **ADX 300**

Life is definitely not just ordinary everyday commute! ADX 300 is the adventure variant of the JOYRIDE 300, it has strengthened frame and longer suspension travel distance to overcome uneven outskirts streets. With ADX 300, riders could change mind instantly to explore the unknown territory on the way of daily commute.

## **CRUiSYM 125 / 300**

The CRUiSYM is coming up with refined new apparel and updated lighting equipment for 2024. Smart key system is standard equipped for the CRUiSYM 300.

## **New DRGBT**

SYM evolved the brand new apparel for the new DRGBT with superbike style aero pack bodywork. This top-of-the-range scooter was destined to have an engine upgrade of intensive power output. The thrilling performance will be ignited in 2024.

## **CLBCU**

Coming after MMBCU, the CLBCU carries on the “crossover and unique” idea to provide user-oriented products. The CLBCU was also taken the bio-inspired design concept. Enlightened by “COLIBRÌ” in Italian, the CLBCU has a hummingbird’s compact figure, agile movement and vivid colours.

Featuring the twin spark plug multiple ignition timing technology “EnMIS”, this 125 c.c. scooter reached 60.9 km/L average fuel consumption (based on Taiwanese test pattern) and thanks to the 6.5 litre fuel tank, it becomes easier to have longer refilling intervals. The CLBCU also embodied rapid wing flapping that a hummingbird can make for the responsive engine and transmission tuning.

(EnMIS: Enhanced Multi-Ignition System)

## **Fugue**

Inspired from the classical music form “Fugue”, the Fugue 125 has equipment that a modern classic scooter should have: full LED lighting, LCD instrument panel, USB QC 3.0 socket, double disc brake system and 27 liter under seat storage. Furthermore, the sporty headlight design perfectly highlights the fancy bodywork.

Embark on the vivid ride with Fugue 125 around the city and be the spotlight!

## **PE3 concept**

SYM unveiled the astonishing aluminum-ion range-extender technology (ART) to the world. The PE3 concept is not only able to satisfy the expectation of zero pollution motion in urban areas but also provides range anxiety free riding experience.

The electric motor is powered by either aluminum-ion batteries or the engine generator, and the electricity can directly supply by the engine generator or via the charging socket. The aluminum-ion battery is the crucial power source of ART. Its chemical characteristics match up the requirements of an extended range EV.

Come to visit EICMA and meet the PE3 concept at SYM booth!
